

Agenda April 18, 2018 8:30 – 16:30
Sjöfartssalen, Gothenburg town hall, Gustav Adolfs torg 1

Charlotte Ljunggren, Airport Director Göteborg Landvetter Airport

Landvetter airports role in the dynamic region

The airport is an integral part of the region and collaboration is essential for successful growth. 7 million passengers in 2018 and a lot of investment in the airport and airport city are on the agenda. What are the key drivers and success factors for continued growth?

Per Vorberg, Mayor Municipality of Härryda

Landvetter Södra – The new modern and human city 5 min from the terminal check-in

New rail connection between the airport and Gothenburg makes planning new cities along the track a reality. Building a completely new city with 25000+ inhabitants is a great opportunity. The hurdles, challenges and the race to build something sustainable in a high growth area.

Per Kristersson, Senior regional planner, GR

Creating surface access to the airport is a challenge!

Surface access to the airport represents a large part of CO2 emissions caused by air traffic. To be able to reduce the air traffic-related environmental footprint many considerations is needed. Public transport, more environmentally friendly vehicles, less car use are some of the initiatives ARC has previously addressed. By looking at land use planning an increased density and less urban sprawl enables a more sustainable and effective public transport. Also when you need to fly to your destination!

Janne Hellåker, Drive Sweden

Urban Mobility 3.0

How will self-driving vehicles change the way we move? How can the new mobility help us redesign our cities? What are the different scenarios, will we have a mobility heaven or hell?

Erik Thune, Project manager Cable car, City of Gothenburg

City Cable car

The city is growing and the river is dividing its two parts. Is a new cable car the solution and how can it be incorporated into the public transport system?
